

Deploying an awesome Cloud function in minutes

Xabi Martinez

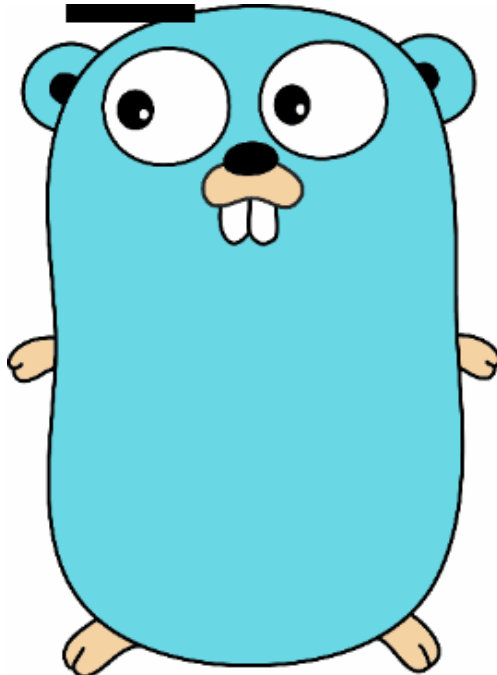

Paack

@xabi_03

SECTION ONE

What is a cloud function?

Serverless application that runs on a server

made at dwtglf.com

- You don't need to care about provisioning, scaling, etc...
- Asynchronous or sync (queues, HTTP request or cloud provider hooks)
- It's a container that turns on and shuts down when don't needed.
- Simple use cases

SECTION TWO

Use cases

- Service to dispatch emails
 - Abstracts services from email integration.
- File processing from google storage
- Cron jobs, like update periodically some xml file.
- Clean log files
